

## Calibration services

Cost-effective, reliable calibration when you need it

**Our services, solutions and products are created to help our customers make smarter decisions. With our calibration services we can reduce business risk, improve quality and help to maintain compliance, whilst saving you time and money.**

**What is calibration?** A calibration is the comparison of an instrument to a known traceable standard. Put simply, a calibration is confidence in knowing that your piece of equipment is going to do what you expect and want it to do.

The main objective is to check the accuracy of measurements by comparing your device's measurements with those of known traceable references. The results of the comparisons are recorded in clear and concise calibration certificates.

Regular calibration is essential - not only to ensure that the measuring instruments controlling your processes remain in spec, but also to gather information about the current condition of the device.

### What are Endress+Hauser's calibration capabilities?

At Endress+Hauser Ltd our experts can provide consultation on calibration intervals, calibration management services or conduct calibrations.

All our calibrations are traceable to the ISO 17025:2017 standard, this includes those carried out on customer sites or at our Manchester facilities. Our in-house flow laboratory calibrations are UKAS accredited.

We offer a variety of calibration options for Pressure, Temperature and Flow, as well as other additional parameters including:

- conductivity
- pH
- volume
- level
- electrical parameters
- density
- rotational speed
- energy transfer
- liquid analysis

Get in touch to see how we can help you: [info@uk.endress.com](mailto:info@uk.endress.com)  
or visit our website [www.uk.endress.com/instrumentation-services/calibration-services](http://www.uk.endress.com/instrumentation-services/calibration-services)

We not only calibrate Endress+Hauser instrumentation but also offer our calibration services for third-party instruments, as well as verification services.
